

Track Software transforms the working relationship between companies and contractors by providing both parties complete transparency, significant cost controls and immediate hard-dollar savings.

Track Software's flagship product, Track™, offers owners the opportunity to dramatically simplify their contractor management. By creating total transparency between terms and conditions of each agreement with the invoices supplied by contractors, Track eliminates errors and redundancy at every stage of the contractor management process.

We recovered nearly \$300,000 in miscalculated charges in one turnaround — a 7% savings.

CONTRACTOR COST MANAGEMENT

Track™ is for managing contractor costs. We offer Labor, Equipment and Materials modules. Track delivers hard-dollar cost savings, administrative simplicity, and maximum visibility into project costs and progress.

PROJECT COST FORECASTING (PCF)

If your company is preparing for a capital project or a shutdown, PCF is the ideal cost forecasting solution. PCF calculates project cost estimates up to 98% accuracy, compiling multiple information streams into a single system.

SAP® INTEGRATION

We have a turnkey solution for companies seeking seamless data sharing between SAP and Track. The Track SAP Integration module pulls cost object information from SAP and pushes payment information back to SAP to close the loop.

PLANNING & ESTIMATING

Our P&E module is the next-generation solution of planning and estimating tools for capital projects that are heavily dependent upon contractor labor and equipment.

CONSULTING SERVICES

Our consulting function is dedicated to providing a full lifecycle of solutions. Built on the foundation of Track, Consulting Services offers customers everything from best practices consulting to training and support.

CLOUD COMPUTING

We give you the flexibility to deploy our applications behind your corporate firewall or have us host them in our "cloud." Whatever your security and implementation requirements, Track Software will customize the hosting based upon your needs.

How Track does it

Track is valuable everywhere contractors make up a large slice of your workforce.

Around the globe, contractors engineer, build, operate and maintain complex manufacturing sites. Daily, on-site contract workforces routinely top several thousand; off-site EPC contractors provide additional professional resources that number in the hundreds or more. Track embraces this reality and provides value to both owners and contractors.

ADDITIONAL FEATURES INCLUDE:

- Plan and estimate "standardized" project hours and costs
- Match owners' future demand and contractors' availability
- Control daily on-site and off-site project work
- Achieve automated payments
- Report contractor/safety performance

“Track paid for itself in less than 6 months!”

— SAP Administrator,
FORTUNE® Global 100 oil & gas company

Track puts a premium on integration issues, whether it's ERP, CMMS or your Access Control System (ACS):

- Seamless integration with your ERP
- POs, WOs, and WBS elements flow to Track
- Service Entries and Time Confirmations flow back to your ERP in real time
- Easy movement of data to and from your CMMS (e.g., Primavera and Maximo)
- Interfaces with all leading ACSs to verify contract labor time and attendance

The elements of Track can be licensed individually, or as a complete solution. For clients with finite computing resources, our software can be delivered as a Service. Or, behind your firewall. Your choice.

ABOUT TRACK SOFTWARE

Founded in 1989, Track Software is the leader in contractor cost management software. The Track platform enhances the working relationship between owners and contractors, giving all parties more visibility into work processes, tighter project controls and significant financial returns. Track is deployed at many of the world's largest refineries, chemical manufacturers and power plants.
