

PRESS RELEASE

Management Controls Completes Contractor Management System Implementation at INVISTA Facility

July 28, 2009 – Houston, Texas - Management Controls, Inc., a leading provider of Contractor Management Systems solutions, announced the successful implementation and integration of Track™ software at INVISTA's Orange, Texas manufacturing facility. The newly integrated system provides fully functional Track™ interfaces to SAP MM and PM as well as to the plant access control system. The INVISTA implementation team will begin installation of Track™ in their Victoria, Texas manufacturing plant before the end of this year.

Management Controls, Inc. software was chosen by INVISTA in part due to an earlier, successful Track™ implementation at Flint Hill Resources, INVISTA's sister company. The Track™ solution was noted as fitting perfectly with INVISTA's strategy on a continual reduction in spending.

Chris Frizzell, the Management Controls project manager, complimented the INVISTA implementation team for their detailed understanding of contractor management practices and project management skills. "This was a successful project, from beginning to end because of INVISTA's continuing dedication to outstanding project management and the successful elimination of any obstacle which might slow the project down."

About Management Controls, Inc. – Track™ software, created by Management Controls, Inc., automates the business processes of service-based contracts – from project time-keeping through invoicing – and delivers actionable information that clients and contractors require to complete projects on-time and on-budget. Track software accurately validates, calculates and compiles the hours and costs of contracted work, delivering project status on a shift basis. Using this real-time information, owners and contractors work collaboratively to manage projects more effectively – for their mutual and individual benefit.
